Today, you’ll each have a chance to ask a question and collect data about something you are interested in learning about each other. You will graph your data using a bar graph and present your information in writing and orally to the class.

You will graph your data using a bar graph and present your information in writing and orally to the class.

Choose a question, for example, “____ _______________________________________”. Ask the question of each person in your room and decide how you will keep track of the answers. There are ___________ students and _______________ adults in your room today.

There are different methods of keeping track of the information, for example a yes/no list or a Venn Diagram.
- Ask each person your question and keep track of the answers using your plan.
- Create a bar graph showing your results. Remember to label your columns, rows, and to title your graph. When you have completed your graph, write two “I learned” statements about your data.

**Oral Presentation:** Tell us what your question was and how you collected the information. Show us your graph and tell us what you learned. Ask your classmates to share any questions or comments they may have.
