Use cotton string to measure the circumference (that is, the distance around) your head. Measure right across your ears and forehead. Have a friend check your work. Record your results. Compare your measurement with your partner’s. Whose circumference is longer? Are they the same? Record your results.

Find someone else in the room who measures the same as you. Record your results.

Look around the classroom. Use your string. Can you find five people or things that measure the same as you? Record your results.

My head measures ______________.
My partner’s head measures ________.
___________ is longer.
___________ measures the same as me.
These are 5 more things that are the same
